

CELAVIVE™

USANA's Breakthrough, High-Performance Skincare Line

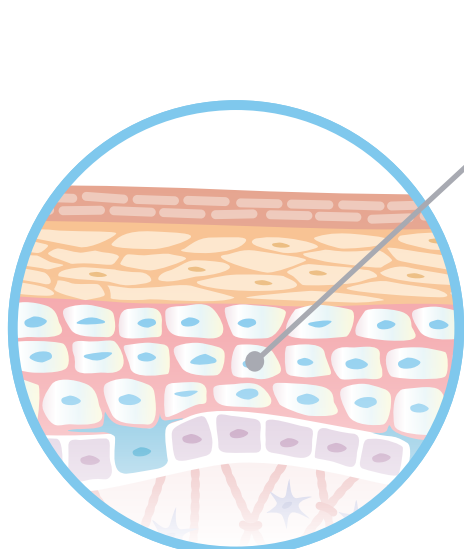

FEATURING INCELLIGENCE®

DISCOVER THE SCIENCE BEHIND CELAVIVE

Healthy-Looking Skin Starts from Within

Your skin cells—or **keratinocytes**—are responsible for creating a healthy barrier that keeps pollutants out and hydration in. They preserve the soft elastic tissues that boost the plump appearance of the skin from the inside.

keratinocytes

Every day, you experience stress from environmental and lifestyle factors, and as you get older, your natural preserving functions slow down. This causes wrinkles and uneven skin tone to appear.

Speaking Your Body's Language for Beautiful Skin

Celavive, powered by InCelligence contains exclusive botanical and peptide combinations that support your natural ability to fight the visible signs of aging.

THE CELAVIVE SIGNALLING COMPLEX INCLUDES:

powerful peptides

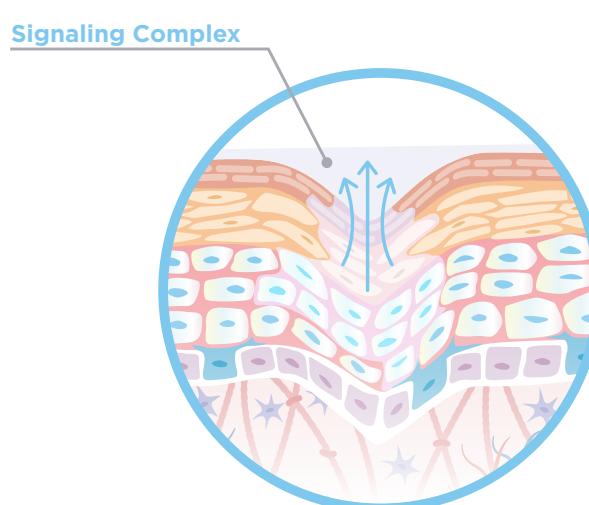

Celavive delivers key nutrients to the source, keratinocytes, which are involved in signalling for countless beauty-preserving functions, including supporting the natural production of enzymes and biomolecules that help prevent the breakdown of a healthy skin matrix and help maintain a youthful-looking appearance.

botanicals

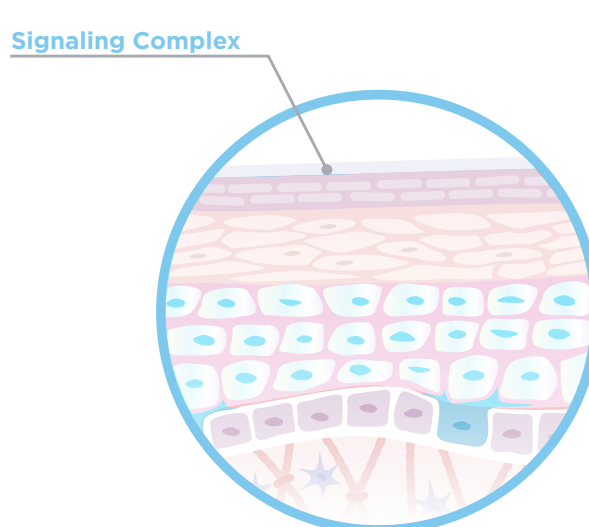

Celavive's Signalling Complex also introduces botanical nutrients into the skin to maximize hydration and support your body's natural lipid production that's needed to combat environmental stress and defend against visible signs of aging.
